

QC SCREENER BALLS

QC Screener / Shaker Balls are available in
Ø1" (25.5mm)
Ø1-1/8" (28.5mm)
Ø1-3/8" (35mm)

Our white neoprene rubber balls are long-wearing and have the perfect blend for both high-bounce and longevity. They are oil resistant and have superior abrasion resistance to gum rubber. With the extreme temperature changes in seed and grain conditioning facilities, make sure your screens are staying as clean as possible throughout the day.

QC balls have a bounce recovery of 80% at 72°F (21°C)
and a bounce recovery of 65% at -30°F (-17.8°C).

Many balls may bounce better but will not hold up to the abrasiveness and temperature fluctuations that are prevalent. We recommend you test your ball tray balls quarterly to see how they are holding up and bouncing.

Our screens can hold up to being cleaned with a piece of wood, but can your efficiency be met with clogged screens?

Contact QC today and see if we can make those ball trays work like new!
